Interest

I have keen interest in Javascript applications and beautiful user interfaces.

I love to learn and build great products.

Javascript, React, Angular, Backbone, Symfony2, CSS, Vim

Work Experience

Frontend developer (remote)   may 2016

Crath

(ReactJS, D3JS) Working on an application to manage and analyse consumption in residential and commercial buildings. The UI is very nice looking and Includes lot of visualizations using d3.js.

Frontend developer   feb. 2015 - may 2015

StaffMatch

(ReactJS) Hired on a short term project as the first developer. I built a dashboard for an interim company using ReactJS.

Frontend developer (remote)   aug. 2013 - oct. 2014

StarterSquad

(AngularJS) Working with a few startups during their bootstrapping phase to help them create a MVP. For example one of the startup was BridalLive (http://www.bridallive.com). A full featured bridal shop software, we spent nearly one year to create this project from scratch to final product.

Frontend developer (remote)   may 2013 - aug. 2013

Stamplia

(BackboneJS) Working with Backbone to build an interface allowing to create and customize email templates (https://builder.stamplia.com). The UI was rich and contained a great set of features.

Frontend developer (remote)   nov. 2012 - apr. 2013

Everlution

(BackboneJS) Built an HR application using BackboneJS (https://www.manta.hr). The data schema was complex to manage with lot of data related to each other.

Frontend developer (remote)   june 2012 - sept. 2012

SparkCentral

(BackboneJS) In charge to architecture the JavaScript frontend using modern JavaScript tools. The application was dealing with very large amount of real-time data coming from Twitter. It was challenging to get the application running smoothly with such amount of data to display.

Backend/Frontend developer   sept. 2011 - jan. 2012

Wisembly

(BackboneJS - SocketIO - Symfony2) Hired as the lead-developer to rebuild a new version of the web application. I was involved in every aspect of the project (frontend/backend/design/devOps). We successfully managed to get the project done in a few months with a major redesign, lot of performance improvements and a much cleaner codebase.

Backend developer   may 2011 - sept. 2011
SensioLabs

(Symfony2) Backend developer on one of the biggest french e-commerce (http://www.laplateforme.com). I was mainly responsible to build a REST api on top of the e-commerce to communicate with a mobile application. I also contributed a lot to unit and functional tests.

Formation

Business School   sept. 2008 - sept. 2010
ESPEME

(I dropped because I was more interested in web development)
